

Product Requirements Document (PRD)

Feature: The "Secret Template" Viral Loop (Product-Led Growth)

1. Feature Overview

Objective: To systematically convert card *receivers* into paying *senders* by leveraging reciprocity and exclusivity, thereby lowering the blended Customer Acquisition Cost (CAC) to zero for these users.

The Strategy: We will replace the generic "Create your own card — free!" button on the receiver's page with a delayed, highly premium "Invite Only" CTA. When clicked, it routes them to a streamlined creation flow that skips unnecessary steps and guarantees they send a *different* 3D template back to their partner.

2. Phase 1: The Receiver's CTA (The "Emotional Trap")

This component lives at the very bottom of the final screen on *all* received cards (e.g., below the text in the Envelope, Cosmic, and Vinyl templates).

UI & UX Requirements:

- **The Delay (CRITICAL):** The CTA block must **not** be visible when the final card is revealed. It must have a CSS fade-in animation (opacity: 0 to opacity: 1) with exactly a **2.5-second delay**. Let them read their partner's message first.
- **The "Exclusivity" Badge:** At the top of the CTA block, include a glowing pill badge that says  Invite Only.
- **The Copy:** * *Headline:* "Feeling the love?"
 - *Body:* "Send one back ✨ You've unlocked a secret 3D template to surprise them."
- **The Button:** A premium, glowing gradient button.
 - *Text:* "Unlock & Reply"
- **The Link:** The button must route to:
[https://heartsync.in/create?source=reply&received=\[current_template_id\]](https://heartsync.in/create?source=reply&received=[current_template_id]) (e.g., received=envelope).

3. Phase 2: The Routing & Creator Flow (The "Magic Lane")

When a user clicks the "Unlock & Reply" button, they must experience a frictionless, VIP creation flow.

Logic Requirements for the /create page:

1. **Detect the Parameter:** On page load, React must check for the source=reply URL parameter.

2. **Skip the Vibe Check:** If source=reply is true, **completely bypass** the "What's the occasion?" screen (Feel Good, Sorry, Birthday, etc.). We already know their intent is to reciprocate.
3. **Pre-fill the Intent (Generic):** Keep the intent/vibe completely generic (e.g., a general "Feel Good" or "Thinking of You" state) so it applies universally to any relationship type. Do not lock them into specific romantic or apology tags.
4. **Change the Header:** Update the main header on the creator page from "Create 3D Card" to "🌟 Unlock Your Secret Reply".

4. Phase 3: The "Surprise" Template Enforcement

If a user received a specific template, they must be assigned the next template in the sequence. This creates a "collectible" experience for couples who send cards back and forth.

Logic Requirements:

- Read the received= URL parameter.
- When the user finishes uploading their photos/audio and hits "Generate", the backend must assign them a **specific** template based on the following strict progression loop:
 - If received=envelope -> Force template cosmic
 - If received=cosmic -> Force template vinyl
 - If received=vinyl -> Force template crystal_ball
 - If received=crystal_ball -> Force template envelope (Restarts the loop)
- **Paywall Remains Unchanged:** The checkout process and pricing must stay exactly as it is. Do NOT apply any discounts. They will pay the full standard price (₹99 or ₹149) just like a standard user, as our data shows organic receivers already convert at full price and we want to maximize margins.

5. Tracking & Analytics (Measuring the K-Factor)

To know if this loop is actually driving revenue, we need strict event tracking.

- **Event 1:** viral_cta_viewed (Fires when the 2.5s delay finishes and the button appears to the receiver).
- **Event 2:** viral_cta_clicked (Fires when they click "Unlock & Reply").
- **Event 3:** payment_success_organic (Fires when a completed checkout has the source=reply tag attached to their session).

Success Metric: We want to see a 25% to 30% click-through rate on the CTA, and an overall organic conversion rate that accounts for at least 30% of total daily revenue.
