

# PRD: Post-Payment Private Dashboard + ₹99 Credits Upsell

**Product:** Heartsync AI

**Feature:** Private dashboard, email link recovery, consent-aware email communication, and 3-card credits upsell

**Phase:** Phase 1

**Primary goal:** Increase AOV, reduce lost-card confusion, and create a repeat-use loop without adding login friction.

---

## 1. Problem Statement

After successful payment, users currently return to the card/share page. Some users click WhatsApp/Instagram, leave the browser, and do not come back. This creates two major issues:

1. Some users lose or miss their card link.
2. Bundle upsell visibility is weak because users mentally exit after sharing.

Current upsell benchmark:

Bundle CTA clicks: 32

Bundle purchases: 6

Click → purchase: 18.75%

This means the bundle offer is not broken. Users who click are buying. The bigger problem is that not enough users see, understand, or trust the offer.

---

## 2. Feature Objective

After successful card payment, send the user to a **private access page/dashboard** where they can:

1. See their unlocked card
2. Copy/share the card link
3. Email themselves the private access link

4. Buy 3 future card credits for ₹99
5. Use credits later without login

The page should feel like:

Your card is ready and safely saved here.

Not like:

Create an account  
Manage a dashboard  
Understand a wallet  
Sign up to continue

---

### 3. Core UX Principles

1. Card-first language.
2. No mandatory login.
3. No upsell before the user can access/share their card.
4. Reduce confusion around losing card links.
5. Make credits feel tangible by showing card-type previews.
6. Mobile-first design.
7. Email capture should feel like card recovery, not signup.
8. Marketing consent must be optional and separate.

Avoid heavy user-facing terms:

Dashboard  
Wallet  
Account  
Token  
Bundle

Prefer:

Card  
Link  
Credits  
Saved here  
Use later  
Email the link

The system can internally use “dashboard,” but user-facing copy should mostly talk about “card” and “link.”

---

## 4. New Post-Payment Flow

### Current Flow

User creates card

- User pays
- User lands on card page
- User shares/copies card
- Bundle appears after share attempt

### New Flow

User creates card

- User pays
- User lands on private access page/dashboard
- Paid card is shown at top
- User copies/shares card
- User can email the link
- User sees ₹99 credits upsell with occasion previews
- User can buy 3 credits
- Credits are saved to the same private link

No sign-in/sign-up in Phase 1.

---

## 5. Page Compatibility

The private dashboard must work smoothly on:

Mobile web  
Desktop web  
Tablet web

Mobile web is the priority because most Meta traffic is mobile.

### Mobile Requirements

Buttons must be large and thumb-friendly.

Page should load fast.  
Share/copy buttons must appear before upsell.  
Avoid blocking modals.  
Avoid layout shifts after loading.  
Preview carousel should be swipeable.  
Email input should be simple.  
CTA hierarchy should be clear.

## Desktop Requirements

Use a two-column layout where possible.

Left column:

- Card preview
- Share actions
- Email link section

Right column:

- Credits upsell
- Preview carousel
- Credit balance if purchased

On mobile, stack vertically:

Header  
Card preview  
Share buttons  
Email the link  
Credits upsell

---

## 6. Dashboard / Private Link Requirement

Each paid card should create or attach to a unique private access link.

Example:

[https://heartsync.in/dashboard/{dashboard\\_token}](https://heartsync.in/dashboard/{dashboard_token})

Requirements:

1. Token must be long, random, and non-guessable.
2. Token should not be sequential.

3. Token should not expose payment ID directly.
4. Link should work without login.
5. Link should support the original card, future cards, and purchased credits.
6. Link should be email-able to the user.

User-facing copy should avoid overusing “dashboard.” The page can be called “private dashboard” internally, but to the user it should feel like:

Your card is saved here.

---

## 7. Page Structure and UI Copy

### Section 1: Success Header

#### Copy

Your card is ready 

#### Subtext

We’ve saved it here so you can share it now or come back anytime.

Purpose:

Reduce anxiety.

Tell user the card is safe.

Avoid introducing complex dashboard language.

---

### Section 2: Card Preview

Show the unlocked card clearly.

#### Required UI Elements

Card thumbnail / video preview

Occasion name

Recipient name if available

Created date/time

Example:

Sorry card for Riya

Created today

The paid card should be the visual hero of the page.

---

## Section 3: Share Actions

### Button Order

[Copy Card Link]

[Share on WhatsApp]

[Share on Instagram]

Reason: Some users miss links. Copy link first reduces lost-link anxiety.

### Helper Text

Tip: Copy the link first so you never lose it.

### Button Behaviors

#### Copy Card Link

Copies final shareable card URL.

Shows toast: Card link copied 

Tracks event: copy\_card\_link\_clicked

#### Share on WhatsApp

Opens WhatsApp share intent with card URL.

Tracks event: whatsapp\_share\_clicked

#### Share on Instagram

Uses current Instagram sharing flow.

If direct link sharing is limited, guide user clearly.

Tracks event: instagram\_share\_clicked

---

## 8. Email Link Recovery

This section should not confuse users with “dashboard.” The user-facing objective is simple:

Get this card on your email as well, so you never lose it.

Technically, the email should contain the **private dashboard/access link**, not only the single card link.

## Section Title

Never lose this card

## Nudge Copy

Get this card on your email as well, so you never lose it.

## Input and CTA

[Enter your email]

[Email the link]

## Success State

Link sent 

Check your email anytime to access this card.

## Error State

Couldn't send the link. Please try again or copy the card link.

## Email Subject

Your Heartsync card link 

## Email Body

Your Heartsync card is saved here:

[Open my card]

You can use this link to access your card anytime.

The button should open the private dashboard URL.

---

# 9. Email Permission, Consent, and Communication Rules

## Objective

When users enter their email, Heartsync should be able to send the card/access link and, where appropriate, reminders related to their purchased credits.

However, Heartsync should clearly separate:

1. Transactional/service emails
2. Marketing/promotional emails

The user should not feel that entering email to recover their card automatically subscribes them to marketing.

---

## Email Collection UX

In the “Never lose this card” section, add an optional marketing consent checkbox.

### Section Title

Never lose this card

### Nudge Copy

Get this card on your email as well, so you never lose it.

### Input and CTA

[Enter your email]

[Email the link]

### Optional Checkbox

[ ] Send me reminders, new card ideas and offers from Heartsync.

### Important UX Rules

1. Checkbox should not be pre-selected.
2. User should be able to email the link without checking the box.
3. Checkbox copy should be simple and visible.

4. Do not use dark patterns.
  5. Marketing consent should be stored separately from email submission.
- 

## Email Permission Types

When a user enters their email, store two separate permission states.

### 1. Transactional Email Permission

This is allowed when the user submits email to receive their card/access link.

Purpose:

Send the card/access link and service-related messages.

Can be used for:

- Card/access link email
- Payment confirmation
- Credit purchase confirmation
- Unused credit reminders
- Credit expiry reminders
- Support/recovery emails

### 2. Marketing Email Permission

This is allowed only if the user checks the optional consent checkbox.

Purpose:

Send promotional, seasonal, and product marketing emails.

Can be used for:

- New card launches
- Festival card promotions
- Discounts/offers
- General Heartsync updates
- Occasion ideas not directly tied to purchased credits

---

## User-Facing Email Consent Logic

## **If user only enters email and clicks “Email the link”**

Store:

email\_submitted = true  
transactional\_email\_allowed = true  
marketing\_email\_allowed = false

Allowed emails:

Card/access link  
Credit reminders if credits are purchased  
Credit expiry reminders  
Payment/credit confirmations

Not allowed:

General promotional campaigns  
New card launch campaigns  
Festival/discount marketing

---

## **If user enters email and checks marketing checkbox**

Store:

email\_submitted = true  
transactional\_email\_allowed = true  
marketing\_email\_allowed = true  
marketing\_consent\_timestamp = current timestamp  
marketing\_consent\_source = post\_payment\_dashboard

Allowed emails:

Card/access link  
Credit reminders  
Payment/credit confirmations  
New card ideas  
Festival card promotions  
Offers and discounts  
Product updates

---

## **Suggested Email Copy**

## Transactional Email: Card Link

Subject:

Your Heartsync card link 

Body:

Your Heartsync card is saved here:

[Open my card]

You can use this link to access your card anytime.

CTA opens the private dashboard/access link.

---

## Transactional Email: Credits Purchased

Subject:

Your 3 Heartsync credits are ready 

Body:

Your 3 card credits have been added.

Use them anytime from this link:

[Use my credits]

You can create Birthday, Sorry, Thank You, Congratulations, Feel Good and other Heartsync cards.

---

## Service Reminder: Unused Credits

Subject:

You still have Heartsync credits left 

Body:

You still have [X] card credits waiting.

Use them anytime for Birthday, Sorry, Thank You, Congratulations, Feel Good and more.

[Use my credits]

This is service-led because it relates to credits the user already purchased.

---

## **Credit Expiry Reminder**

Subject:

Your Heartsync credits are expiring soon

Body:

You have [X] card credits left.

Use them before [expiry date].

[Use my credits]

---

## **Suggested Email Timing**

For users who bought credits:

Day 0: Credit purchase confirmation

Day 3: Unused credit reminder if credits\_remaining > 0

Day 10: Second unused credit reminder if credits\_remaining > 0

30 days before expiry: Expiry reminder

7 days before expiry: Final expiry reminder

For users who only emailed the card link:

Immediate: Card/access link email

Optional Day 1: "Your card is saved here" service reminder

Do not send promotional emails unless marketing consent is true.

---

## **Marketing Email Rules**

Only send marketing emails if:

marketing\_email\_allowed = true

Marketing examples:

Rakhi cards are live  
Friendship Day cards are live  
New Birthday card templates  
Limited-time card offers  
Festival discounts

Every marketing email must include:

Clear Heartsync sender identity  
Unsubscribe link  
Reasonable sending frequency

Recommended maximum early frequency:

1–2 marketing emails per week

---

## 10. Credits Upsell

### Offer

3 card credits for ₹99  
Valid for any Heartsync card  
No login needed  
Credits linked to this private link

### Placement

Credits upsell appears below:

1. Card preview
2. Share buttons
3. Email the link section

Do not show the upsell before the user can access/share the card.

---

### Upsell Widget Goal

The upsell should make the offer tangible. The user should instantly understand:

What am I buying?

Which cards can I use?

How will they look?

Where will I use them later?

---

## Upsell Widget Copy

### Title

Send more cards later 

### Main Offer Copy

Get 3 card credits for ₹99.

Use them for any Heartsync card from this link.

### Card Type Explanation

Choose from Birthday, Sorry, Thank You, Congratulations, Feel Good and more.

### Trust/Access Copy

No login needed. Your credits stay saved here.

### Optional Expiry Note

Valid for 12 months.

### CTA

Get 3 credits for ₹99

---

## 11. Occasion Preview Carousel

The upsell widget should include a horizontal swipeable preview carousel.

### Purpose

Make the ₹99 offer feel real by showing examples of card types the credits can unlock.

# Mobile Layout

Horizontal swipeable carousel:

[Birthday 🎂] [Sorry 📧] [Feel Good 😊] [Thank You 🙏] [Congrats 🎉]

Each preview card should include:

Small GIF / short video / animated thumbnail

Occasion name

Short emotional use case

## Preview Cards

### Birthday

Birthday 🎂

Don't just send HBD.

### Sorry

Sorry 📧

Say it better than a text.

### Feel Good

Feel Good 😊

Make someone smile today.

### Thank You

Thank You 🙏

Make gratitude feel personal.

### Congratulations

Congrats 🎉

Celebrate their big moment.

During active events, add the event card into the carousel.

Examples:

Rakhi

Friendship Day

Mother's Day

Father's Day

Valentine's Day

Event cards can be placed first or second while active.

---

## Preview Behavior

1. Swipeable horizontally on mobile.
2. Static row or carousel on desktop.
3. Tap/click preview can open larger preview/modal.
4. Auto-muted if video.
5. Lightweight assets only.
6. Lazy-load carousel assets.
7. Do not slow down post-payment page.

Recommended asset format:

Short muted MP4 or animated WebP preferred.  
Avoid heavy GIFs if they slow loading.

Recommended dimensions:

Mobile preview card width: 120–150px  
Desktop preview card width: 140–180px  
Aspect ratio: 9:16 or 4:5

---

## Occasion Data Model for Carousel

Each occasion preview should support:

occasion\_id  
occasion\_name  
emoji\_or\_icon  
short\_use\_case  
preview\_asset\_url  
preview\_asset\_type: image / webp / mp4  
enabled\_status  
display\_order

Recommended default order:

1. Birthday
2. Sorry

3. Feel Good
  4. Thank You
  5. Congratulations
  6. Active event card, if any
- 

## 12. Upsell Widget Wireframe

### Mobile

Send more cards later 

Get 3 card credits for ₹99.

Use them for any Heartsync card from this link.

Choose from Birthday, Sorry, Thank You, Congratulations, Feel Good and more.

[Swipeable Preview Carousel]

Birthday 🎂 — Don't just send HBD

Sorry 🙏 — Say it better than a text

Feel Good 😊 — Make someone smile today

Thank You 🙏 — Make gratitude feel personal

Congrats 🎉 — Celebrate their big moment

No login needed. Your credits stay saved here.

Valid for 12 months.

[Get 3 credits for ₹99]

### Desktop

Send more cards later 

Get 3 card credits for ₹99.

Use them for any Heartsync card from this link.

[Birthday Preview] [Sorry Preview] [Feel Good Preview] [Thank You Preview] [Congrats Preview]

No login needed. Your credits stay saved here.

[Get 3 credits for ₹99]

---

## 13. Upsell Payment Flow

When user clicks:

[Get 3 credits for ₹99]

Flow:

Open Razorpay/payment

→ User pays ₹99

→ Payment success

→ Return to same private dashboard

→ Credits balance updates

### After Successful Credits Purchase

Show:

3 credits added 

Then:

Your credits: 3 cards available

Buttons:

[Create another card]

[Copy this link]

[Email the link]

If email was not submitted earlier, show the email section again.

---

## 14. Credit Rules

For Phase 1:

3 credits = ₹99

1 credit = 1 paid Heartsync card

Credits work for any current Heartsync card  
Credits are attached to the private link  
No login required  
Credits are valid for 12 months

Valid card categories:

Sorry  
Birthday  
Thank You  
Congratulations  
Feel Good  
Active event cards

Credits should stack if purchased multiple times.

Example:

3 credits + 3 credits = 6 credits

---

## 15. Credit Balance States

### Before Credit Purchase

Show the upsell widget.

Send more cards later   
Get 3 card credits for ₹99.

### After Credit Purchase

Replace upsell widget with balance card.

Your credits: 3 cards available 

Use your credits to create and unlock any Heartsync card.

[Create a card using credits]

### After One Credit Used

Your credits: 2 cards available

## After Credits Exhausted

Your credits are used up.

Get 3 more card credits for ₹99.

[Get 3 credits]

---

## 16. Using Credits

When a user creates another card from the dashboard and has credits available, at unlock step show:

Use 1 credit to unlock this card

Subtext:

Your credits: 3 available

CTA:

Use 1 credit

After successful credit use:

Card unlocked 

1 credit used.

Credit balance decreases by 1.

No Razorpay payment is required when credit is used.

---

## 17. Final Mobile Page Wireframe

Your card is ready 

We've saved it here so you can share it now or come back anytime.

[Card Preview]

[Copy Card Link]

[Share on WhatsApp]

[Share on Instagram]

Tip: Copy the link first so you never lose it.

Never lose this card

Get this card on your email as well, so you never lose it.

[Enter your email]

[Email the link]

[ ] Send me reminders, new card ideas and offers from Heartsync.

Send more cards later 

Get 3 card credits for ₹99.

Use them for any Heartsync card from this link.

Choose from Birthday, Sorry, Thank You, Congratulations, Feel Good and more.

[Swipeable Preview Carousel]

No login needed. Your credits stay saved here.

Valid for 12 months.

[Get 3 credits for ₹99]

After credits purchase:

3 credits added 

Your credits: 3 cards available

[Create another card]

[Copy this link]

[Email the link]

---

## 18. Data Model Requirements

## Dashboard / Private Access Link

dashboard\_id  
dashboard\_token  
created\_at  
email\_optional  
email\_submitted\_at  
transactional\_email\_allowed  
marketing\_email\_allowed  
marketing\_consent\_timestamp  
marketing\_consent\_source  
marketing\_unsubscribed\_at  
last\_email\_sent\_at

## Cards

card\_id  
dashboard\_id  
occasion  
recipient\_name  
card\_url  
payment\_status  
created\_at  
unlocked\_at

## Credits / Wallet

wallet\_id  
dashboard\_id  
credits\_total  
credits\_remaining  
expires\_at  
created\_at

## Credit Transactions

transaction\_id  
dashboard\_id  
type: purchase / use / refund / expiry  
credits\_delta  
related\_card\_id  
related\_payment\_id  
created\_at

## Payments

payment\_id  
dashboard\_id  
amount  
type: card\_purchase / credits\_purchase  
status  
razorpay\_payment\_id  
created\_at

## Occasion Preview Assets

occasion\_id  
occasion\_name  
emoji\_or\_icon  
short\_use\_case  
preview\_asset\_url  
preview\_asset\_type  
enabled\_status  
display\_order

## Email Log

email\_log\_id  
dashboard\_id  
email  
email\_type: transactional / service\_reminder / marketing  
template\_name  
sent\_status  
sent\_at  
opened\_at\_optional  
clicked\_at\_optional  
unsubscribe\_clicked\_optional

---

# 19. Tracking Events

## Dashboard

dashboard\_view\_after\_purchase  
dashboard\_revisited

## Share Actions

copy\_card\_link\_clicked  
whatsapp\_share\_clicked  
instagram\_share\_clicked

## Email Link

email\_link\_section\_viewed  
email\_link\_submitted  
email\_link\_sent\_success  
email\_link\_sent\_failed

## Email Consent

marketing\_checkbox\_viewed  
marketing\_checkbox\_checked  
marketing\_checkbox\_unchecked  
marketing\_consent\_given  
marketing\_unsubscribed

## Email Communication

unused\_credit\_email\_sent  
unused\_credit\_email\_clicked  
credit\_expiry\_email\_sent  
credit\_expiry\_email\_clicked  
marketing\_email\_sent  
marketing\_email\_clicked

## Credits Upsell

credits\_widget\_viewed  
credits\_carousel\_swiped  
credits\_preview\_clicked  
credits\_offer\_clicked  
credits\_payment\_started  
credits\_purchased  
credits\_purchase\_failed

## Credit Usage

create\_card\_from\_dashboard\_clicked  
credit\_use\_option\_shown

credit\_used  
credit\_balance\_zero

## Optional Advanced Tracking

last\_preview\_seen\_before\_click  
preview\_clicked\_before\_purchase  
occasion\_preview\_most\_viewed

This helps identify which occasion preview sells the upsell best.

---

# 20. Success Metrics

## 7-Day Targets

Email link submit rate: 10%–25%  
Marketing checkbox opt-in rate: 5%–15%  
Credits offer click rate: 5%–10%  
Credits click → purchase: 15%–25%  
Credits shown → purchase: 1%–2.5%  
AOV lift: 5%–10%  
Lost-link support cases: down meaningfully

Current benchmark:

32 credits CTA clicks  
6 credits purchases  
18.75% click → purchase

The main goal is to increase offer views/clicks while keeping click-to-purchase above 15%.

---

# 21. Edge Cases

## User closes browser after payment

Dashboard and card should already be created after successful payment confirmation.

## Payment succeeds but redirect fails

User should be recoverable internally through Razorpay payment/order ID.

## Email sending fails

Show:

Couldn't send the link. Please try again or copy the card link.

## User buys credits multiple times

Allow stacking.

3 credits + 3 credits = 6 credits

## Credits expire

Recommended expiry:

12 months from purchase

If expired:

Your credits have expired.

## Credits payment succeeds but redirect fails

On dashboard revisit, credits should still appear based on Razorpay webhook confirmation.

## User unsubscribes from marketing

Set:

marketing\_email\_allowed = false

marketing\_unsubscribed\_at = current timestamp

Transactional/service emails related to cards, payments, and credits can still be sent where appropriate.

---

## 22. Phase 1 Scope

Build only:

1. Private dashboard after successful payment
2. Paid card preview
3. Copy/share card buttons
4. Email the link
5. Optional marketing consent checkbox
6. Transactional email for card/access link
7. ₹99 credits upsell
8. Occasion preview carousel
9. Credits purchase
10. Credit balance
11. Credit usage
12. Tracking events

Do not build yet:

Login/sign-up  
Multiple upsell plans  
Reply-card upsell  
Subscription  
Referral program  
Complex wallet UI

---

## 23. Launch Plan

### Phase 1A: Dashboard Redirect

Build:

Post-payment private dashboard  
Paid card shown at top  
Copy/share buttons  
Private access link generated

### Phase 1B: Email the Link

Build:

Email input  
Email the link CTA  
Marketing consent checkbox  
Email template  
Email success/error states  
Email tracking

## **Phase 1C: Credits Upsell Widget**

Build:

₹99 credits offer  
Occasion preview carousel  
Credits payment  
Credits balance state

## **Phase 1D: Credit Usage**

Build:

Create card using credits  
Use 1 credit unlock flow  
Credit balance decrement

## **Phase 1E: Analytics Review**

After 7 days, review:

Dashboard views  
Email submissions  
Marketing opt-ins  
Upsell views  
Upsell clicks  
Upsell purchases  
AOV lift  
Credit usage  
Lost-link cases

---

# **24. UI/UX Acceptance Criteria**

User lands on dashboard immediately after payment.

User can see the unlocked card without confusion.  
User can copy/share the card within first screen or near-first screen on mobile.  
User can email the link using simple card-first language.  
User can email the link without opting into marketing.  
Marketing checkbox is optional and unchecked by default.  
User sees a clear ₹99 credits offer.  
User can visually understand available card types from preview carousel.  
User can purchase credits without login.  
Credits appear on same dashboard after purchase.  
User can use credits later from the same link.  
Page works smoothly on mobile and desktop.

---

## 25. Development Acceptance Criteria

Dashboard token is generated securely.  
Dashboard persists after payment success.  
Dashboard can show all linked cards and credits.  
Email sends private access/dashboard link successfully.  
Email consent states are stored correctly.  
Marketing consent is not assumed from email submission.  
Razorpay payment for credits is separate from original card payment.  
Credits purchase is confirmed via webhook.  
Credits balance updates correctly.  
Credits can be used instead of payment.  
Events are tracked for dashboard, email, consent, upsell, carousel, and credit usage.  
Page is responsive and performant.  
Preview assets are lazy-loaded.

---

## 26. Final Recommendation

Build this first version exactly as:

Private dashboard  
+ card/share safety  
+ Email the link  
+ optional marketing consent  
+ 3 credits for ₹99  
+ visual occasion previews  
+ no login

This should increase AOV without hurting the main conversion flow, while also reducing lost-link confusion and creating a cleaner retention layer for unused credits and future card launches.
